

Extrac-Tec HPC-30 Wash Plant

[Inventory ID #213054]

Manufacturer: Extrac-Tec

- **HPC-30 fine gold recovery:** The ideal solution for small-scale and start-up mining operations, the HPC-30 recovers fine gold and flour gold particles that are typically lost by other machines.
- **Most advanced gravity recovery systems:** The EXTRAC-TEC HPC-30 Heavy Particle Concentrator is one of the most advanced gravity recovery systems available. The HPC-30 system offers unbeatable recovery rates for fine gold recovery in Alluvial Mining or Placer Mining applications, whether for Small-Scale or Artisanal Mining operations or for bulk sampling.
- **Applications:** The design of the HPC-30 also makes it suitable for a broad range of **heavy particle concentration applications** including gravity concentration of minerals such as tin or cassiterite, copper or malachite, lead, silver, garnets and most other minerals, metals and gemstones.
- The HPC-30 recovery unit is **offered with a choice of feed systems** to accommodate a broad range of applications, sites and operating conditions. As your operation grows and more capacity is required, additional modules can be added and integrated into a high capacity solution.
- **Up to 98% recovery rate of Gravity Recoverable Gold** is routinely achieved with retention of free gold particles as small as 50 microns (300 mesh).
- **Chemical-free operation** minimizes environmental impact.
- The HPC-30 and matching AF-30 and FC-30 feeders are **fully mobile** and can be set up and running within hours.
- **Flexibility / choice of feed system** – AF-30, FC-30 or your own Feeder.
- The HPC-30's versatility allows it to be used for almost **any Mineral Concentration and many gemstone recovery applications**, as well as for exploration, sampling and ongoing production.
